BREAKING NEWS

Psst... The Covid-19 Vaccines cause AIDS... Pass it on...

BY THE EXPOSÉ ON FEBRUARY 21, 2022 • (37 COMMENTS)

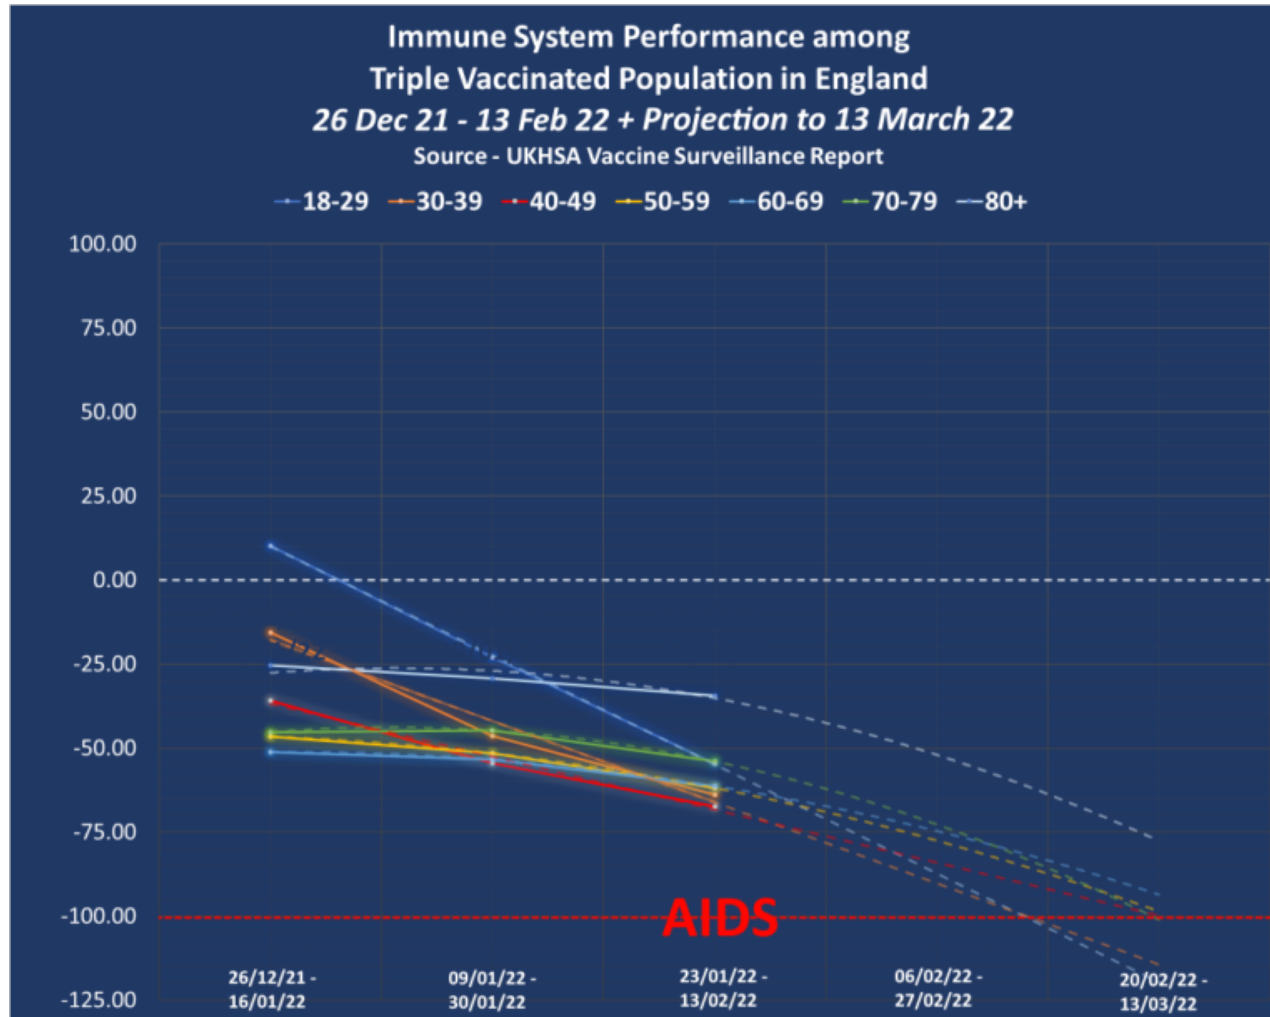

Official data published by the UK Health Security Agency is beginning to look terrible for those who have succumbed to three doses of the Covid-19 vaccine, with statistics showing the triple vaccinated are now up to three times more likely to be infected with Covid-19 than the unvaccinated population.

But a look back at previous statistics shows that this risk is increasing by the week, indicating the Covid-19 injections are damaging the natural immune system, and an analysis of the official UKHSA data strongly suggests most of the triple vaccinated population are just weeks away from developing full blown Acquired Immune Deficiency Syndrome (AIDS).

The UK Health Security Agency (UKHSA) publishes a weekly Covid-19 Vaccine Surveillance Report that contains figures on Covid-19 cases, hospitalisations and deaths by vaccination status.

In their Week 3 – 2022 Report, the UKHSA changed tack and only included Covid-19 case/hospitalisation/death rates per 100k among the triple vaccinated population, after previously including the rates for both the double and triple vaccinated.

As we recently revealed (<https://dailyexpose.uk/2022/02/08/uk-gov-data-suggests-fully-vaccinated-have-developed-vaids/>) this is clearly because the rates are showing that the double vaccinated are more likely to be infected, more likely to be hospitalised, and more likely to die of Covid-19 (<https://dailyexpose.uk/2022/02/08/uk-gov-data-suggests-fully-vaccinated-have-developed-vaids/>), than the unvaccinated population, indicating Vaccine-Associated Enhanced Disease or Acquired Immune Deficiency Syndrome.

However, it has only taken a matter of weeks for the rates among the triple vaccinated to increase drastically compared to the rates among the triple vaccinated population, and analysis shows the triple vaccinated may now develop full blown Acquired Immune Deficiency Syndrome as soon as March 13th 2022.

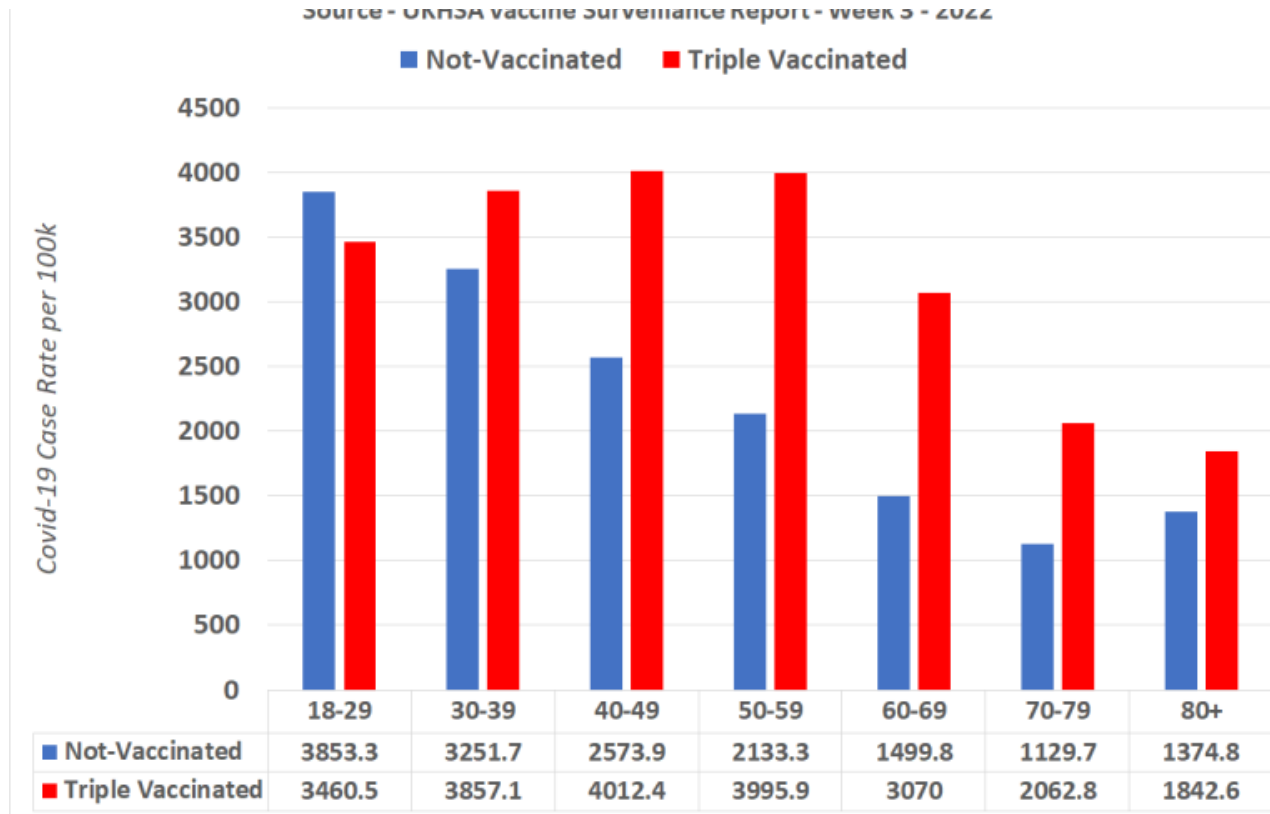

The following chart shows the Covid-19 case-rates per 100k population among the triple vaccinated and not-vaccinated in England between 26th Dec 21 and 16th Jan 22. The data has been extracted from Table 12 found on page 38 of the [UKHSA Vaccine Surveillance Report – Week 3 – 2022](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1049160/Vaccine-surveillance-report-week-3-2022.pdf). (https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1049160/Vaccine-surveillance-report-week-3-2022.pdf),

Source Data

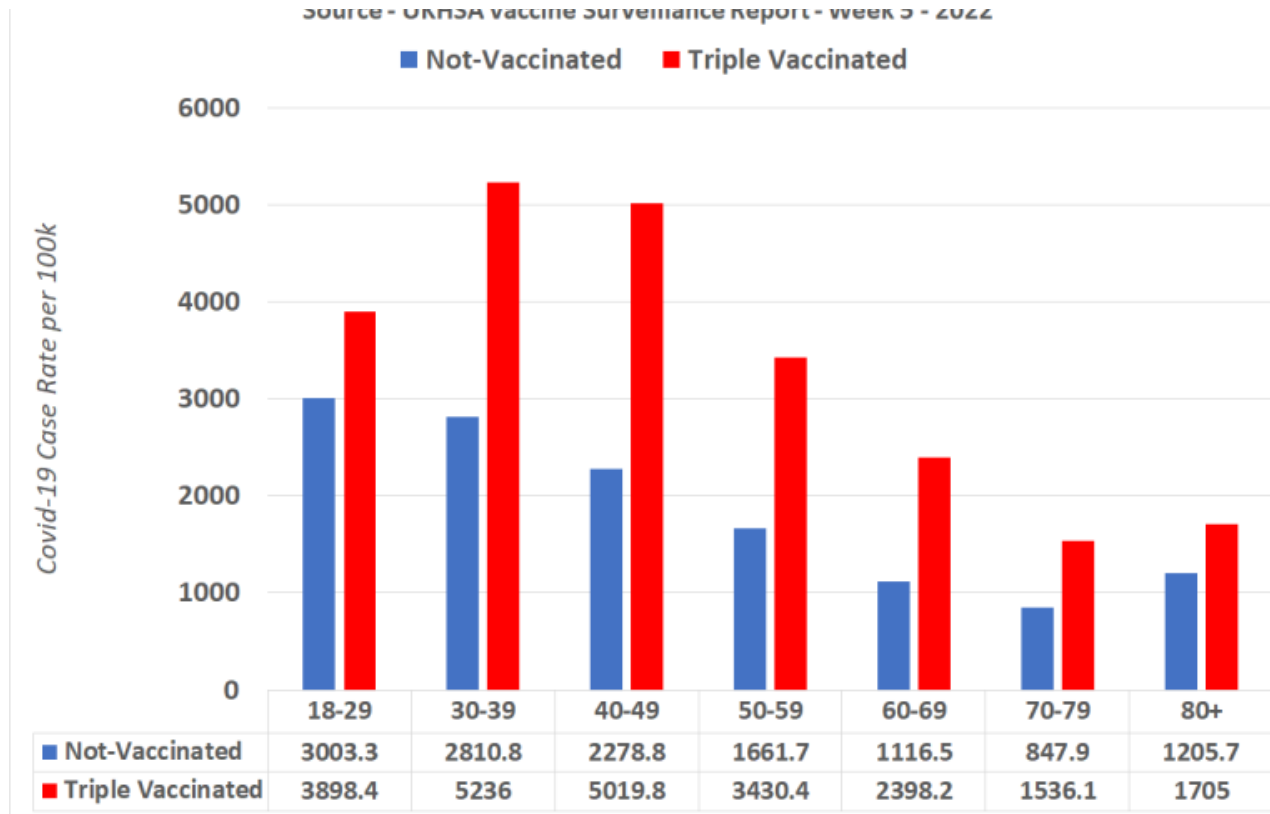

Between 26th Dec 21 and 16th Jan 22, it was only triple vaccinated people between the age of 18 and 29 who had a lower case-rate per 100k than the not vaccinated population. However, this would soon change by the end of January 2022.

The following chart shows the Covid-19 case-rates per 100k population among the triple vaccinated and not-vaccinated in England between 9th Jan 22 and 30th Jan 22. The data has been extracted from Table 13 found on page 47 of the [UKHSA Vaccine Surveillance Report – Week 5 – 2022](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1052353/Vaccine_surveillance_report_-_week_5_-_2022).

Source Data

The Covid-19 case-rate per 100k was highest among every age group in the triple vaccinated population between 9th Jan and 30th Jan 22. But unfortunately, by the time 13th Feb rolled around the gap between the triple vaccinated and unvaccinated had grown even bigger.

The following chart shows the Covid-19 case-rates per 100k population among the triple vaccinated and not-vaccinated in England between 23rd Jan 22 and 13th Feb 22. The data has been extracted from Table 13 found on page 44 of the [UKHSA Vaccine Surveillance Report – Week 7 – 2022](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1055620/Vaccine_surveillance_report_-_week_7.pdf). Source Data

By the middle of February 2022, things were looking terrible for anyone who was triple vaccinated and between the age of 18 and 59, but things weren't much better for anyone triple vaccinated and between the age of 60 and 80+.

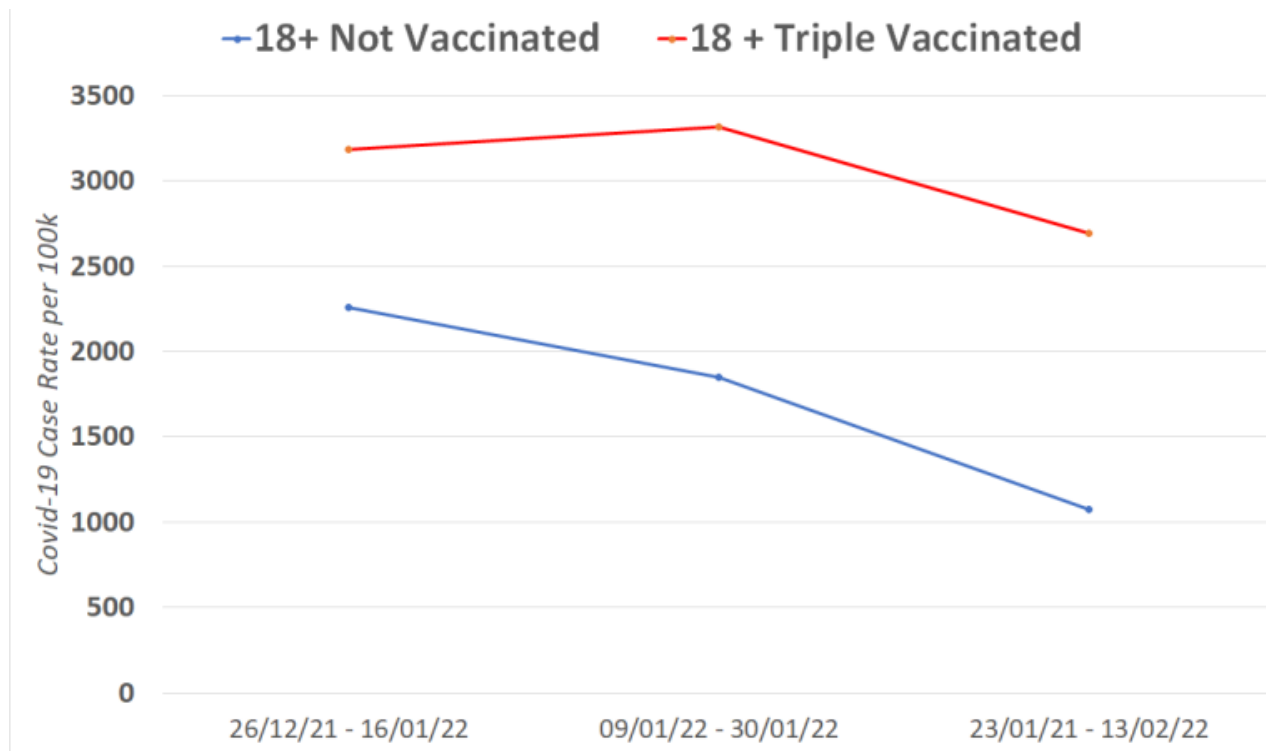

The following chart shows the average Covid-19 case rate among all adults by vaccination status between 26th Dec 21 and 13th Feb 22.

IT'S THE FINAL DAY TO SAVE THE EXPOSÉ – Less than 0.1% of you support us even though we rely solely on your support. X

This chart displays beautifully how things have dramatically improved for the unvaccinated over the past 2 months, and how things have drastically got worse for the triple vaccinated over the past two months. The case-rate per 100k has fallen drastically in the week 3, week 5 and week 7 UKHSA Vaccine Surveillance Reports, with the largest decrease occurring between week 5 and week 7.

But the case-rate per 100k increased drastically between week 3 and week 5. It did however fall between week 5 and week 7, but unfortunately for the triple vaccinated the fall was nowhere near the drastic fall seen in the unvaccinated population.

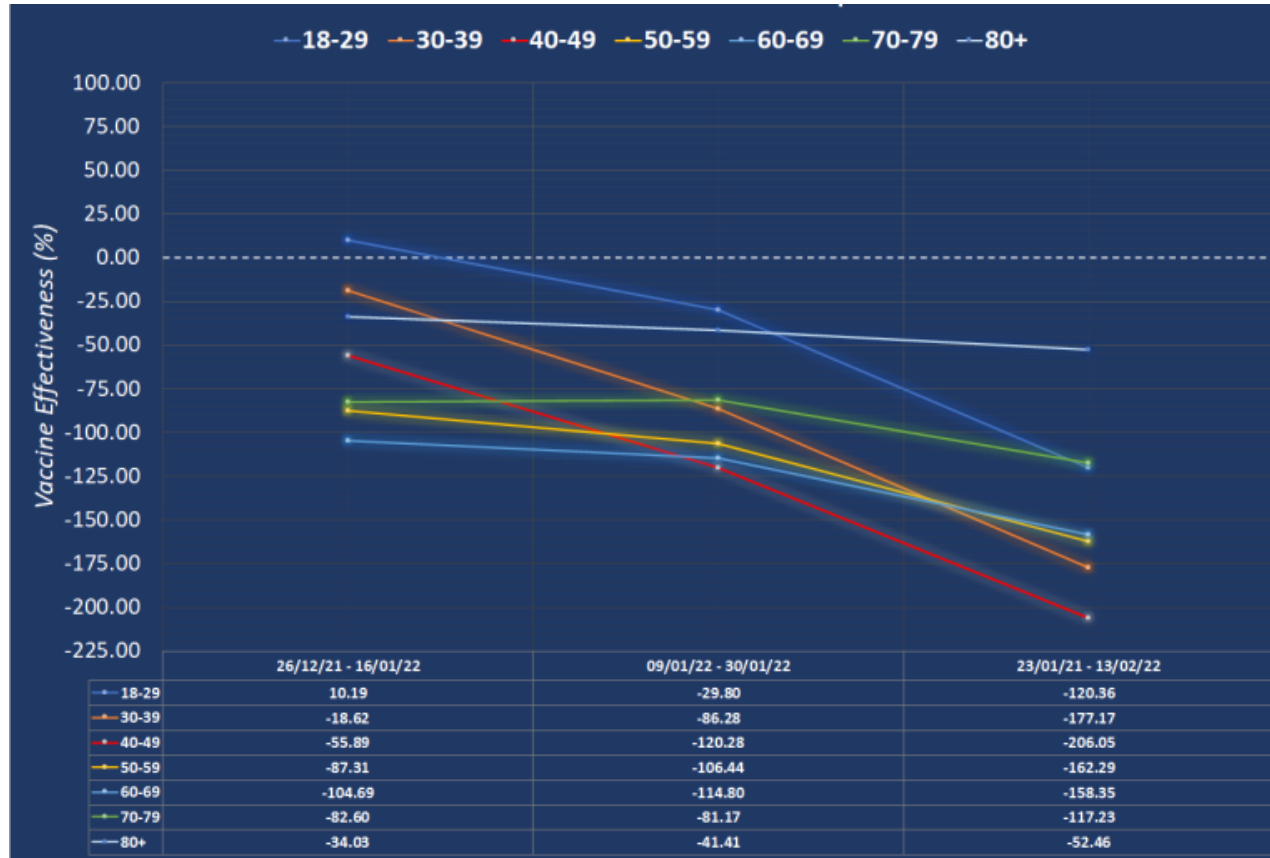

Now that we know the case rates per 100k, we can use Pfizer's vaccine effectiveness formula to calculate the real world effectiveness of the Covid-19 injections after three doses in England.

$$\text{Unvaccinated Case Rate} - \text{Vaccinated Case Rate} / \text{Unvaccinated Case Rate} \times 100$$

The following chart shows the real world vaccine effectiveness after three doses by age group in England between 26th Dec 21 and 13th Feb 22 –

IT'S THE FINAL DAY TO SAVE THE EXPOSÉ - Less than 0.1% of you support us even though we rely solely on your support. The only time vaccine effectiveness was shown to be positive among the triple vaccinated was between 26th Dec 21 and 16th Jan 22 among the 18-29 age group. But even then that positive effectiveness only equated to 10.19%. During the same period every other age group was showing a negative vaccine effectiveness, with the lowest recorded among the 60-69 age group at minus-104.69%.

However, between 9th Jan and 30th Jan 22, things shifted and the lowest recorded vaccine effectiveness was among the 40-49 age group at minus-120.28%. The +10.19% positive effectiveness in the 18-29 age group also fell to minus-29.8%.

But things took an even larger turn for the worse between 23rd Jan and 13th Feb 22 with the lowest vaccine effectiveness reaching minus-206.05% among the 40-49 age group, and the vaccine effectiveness fell to minus-120.36% among the 18-29 age group, after being +10.19% just weeks earlier.

supply of “memory” t-cells and antibodies that will remember how to fight that disease in the future.

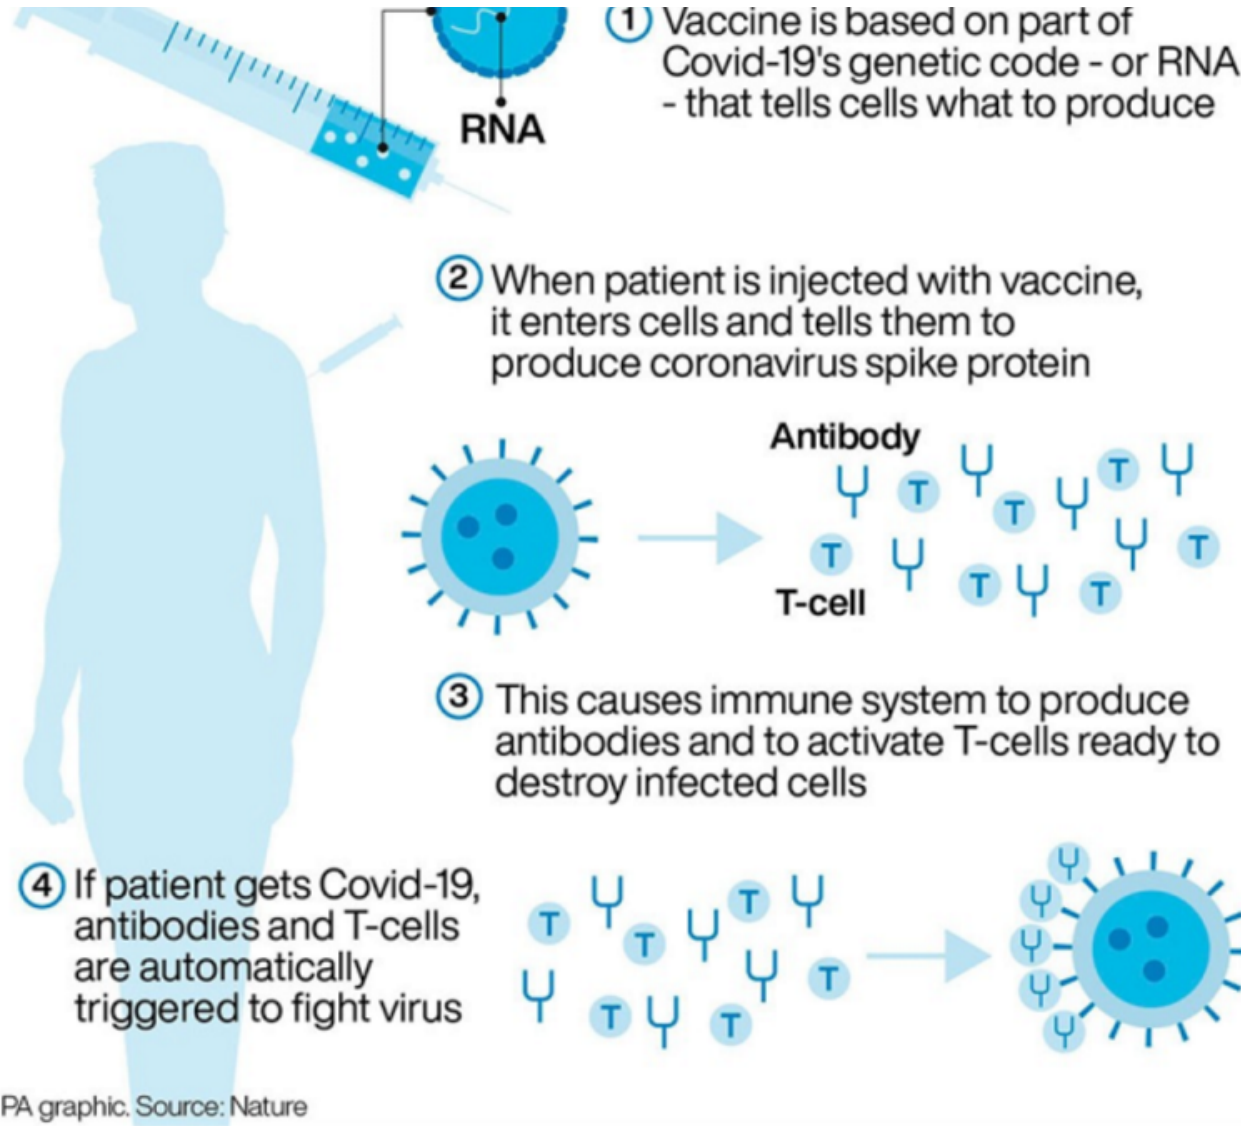

So, when the authorities state that the effectiveness of the vaccines weaken over time, what they really mean is that the performance of your immune system weakens over time.

X

- But a vaccine effectiveness of -50% would mean that the unvaccinated were 50% more protected against Covid-19 than the fully vaccinated. In other words the immune system performance of the vaccinated is 50% worse than the natural immune system performance of the unvaccinated. Therefore, the Covid-19 vaccines have damaged the immune system.

But to work out immune system performance we have to alter the calculation used to work out vaccine effectiveness slightly and divide our answer by either the largest of the vaccinated or unvaccinated case rate.

Unvaccinated case rate – Vaccinated case rate / largest of the unvaccinated / vaccinated case rate = Immune System Performance

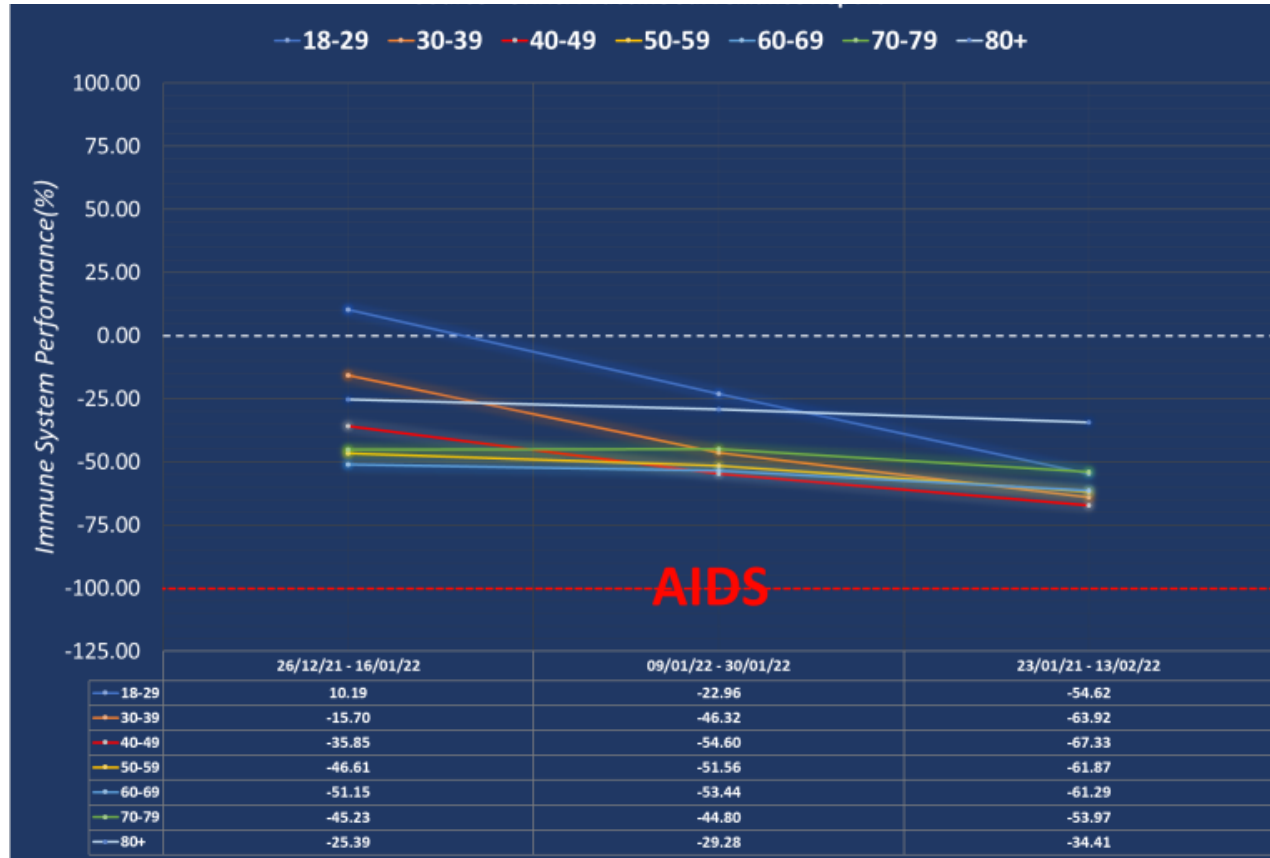

The following chart shows the immune system performance of the triple vaccinated population in England between 26th Dec 21 and 13th Feb 22 –

37

Donate X

The lowest immune system performance is among the 40-49 year olds at minus-67.33%, whilst the highest immune system performance is among 80+ at minus-34.41%.

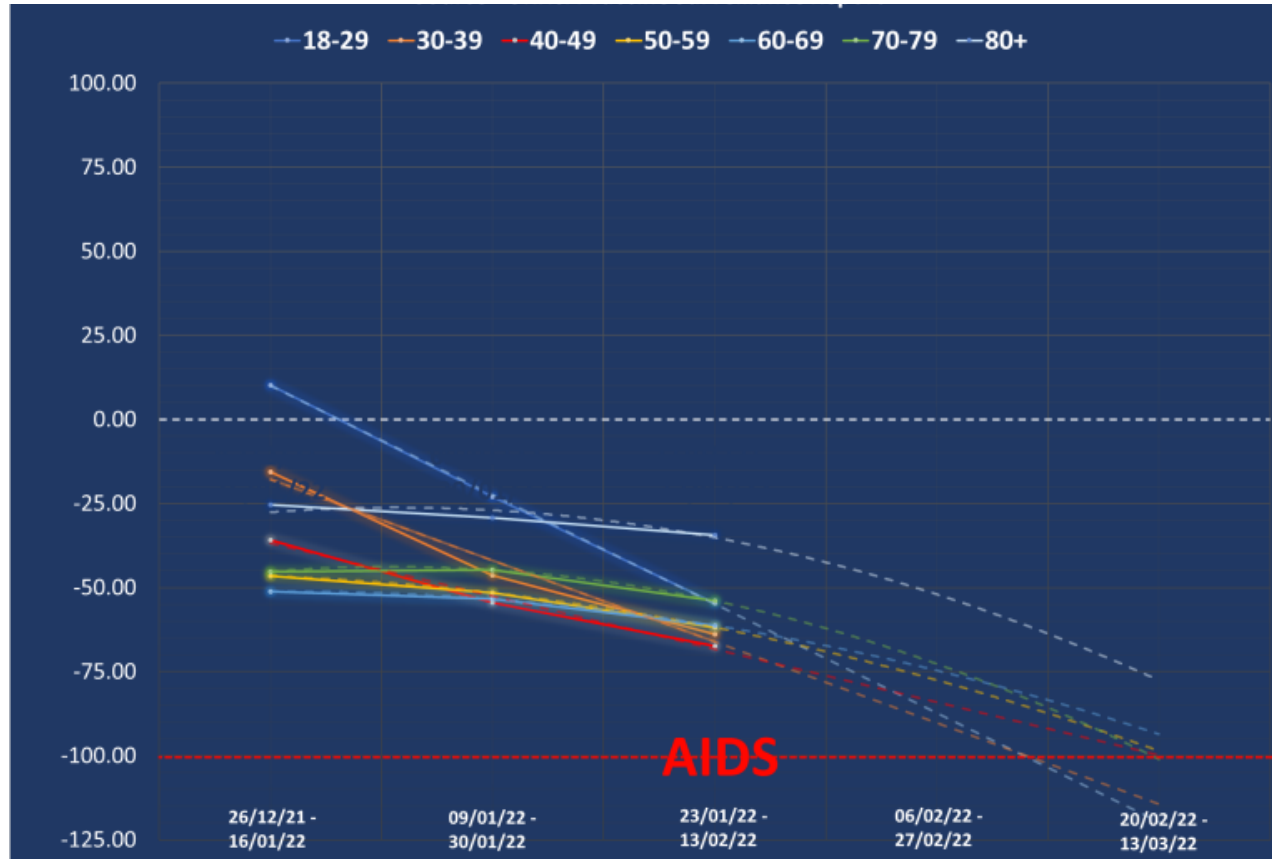

37

If immune system performance was to hit minus-100% then this would be indicative of Acquired Immune Deficiency Syndrome, but as it stands the majority of the triple vaccinated population are down to the last 35-40% of their immune system capability that protects them against viruses, bacteria and certain cancers.

But, as we show in the following chart, it is not going to take long for the majority of the triple vaccinated to surpass the minus-100% barrier and develop full blown Acquired Immune Deficiency Syndrome, with current projections showing this could occur as soon as March 13th.

IT'S THE FINAL DAY TO SAVE THE EXPOSÉ - Less than 0.1% of you support us even though we rely solely on your support. But if every single one of you reading this supported us today we'd have the funds to keep going for another year and would then be able to remove this irritating banner... Donate X

Projections show that everyone between the age of 18 and 39 who has had three doses of a Covid-19 vaccine could surpass the minus-100% barrier indicating AIDS by the end of February 2022, whilst everyone between the age of 40 and 59, and 70 and 79 could have surpassed the minus-100% barrier indicating AIDS by 13th March 22.

The only age groups who are projected to have not yet developed AIDS by the 13th March are the 80+ and 60-69 year-olds. But projections show 60-69-year-olds will still be just a couple of weeks away from having developed AIDS, whilst the 80+ will perhaps have to wait until the middle of April.

The figures for the 80+ could be slightly skewed however, due to this age group suffering the most deaths due to statistically being more likely to die. This would therefore skew the population size and therefore skew the data.

individuals with a weak immune system.

Unfortunately, UKHSA data shows that triple vaccinated Brits are just weeks away from developing Acquired Immune Deficiency Syndrome, (AIDS) or a novel condition with similar attributes that can only be described as Covid-19 Vaccine Induced Acquired Immune Deficiency Syndrome (VAIDS).

I hope you're right, but don't see the elites giving in. Example, Justin Trudeau arresting peaceful protesters, stealing their assets, all because he cares so much peoples' health.

Next up... they'll pivot to climate change... 'two weeks lockdown to flatten the curve/save the planet/fill-in-the-blank'. This morphs into two years of further economic destruction, bankrupting most of the remaining plebes who aren't already bankrupt.

The elites have come so far. Why would they stop now? Pivot yes, stop no.

This is just heartbreaking. I begged & pleaded with ppl not to take these shots until more research could be done . This is exactly why the FDA & Pfizer has asked for 55 years before disclosing the ingredients in these experiental shots that can't even be called vaccines!! They know we will all be dead by then! And to give these to our children? What are parents thinking?? The democrats wants to kill off human life! On day 1 of hearing about covid I said they want us all dead. Then the shots I said why would they try to kill us then cure us with their shot?? They wouldn't. They want us dead no matter . Just dead.

IT'S THE FINAL DAY TO SAVE THE EXPOSÉ – Less than 0.1% of you support us even though we rely solely on your support. But if every single one of you reading this supported us today we'd have the funds to keep going for another year and would then be able to remove this irritating banner... The best way to end this hoax is to stop complying . The WHO nor the CDC can provide any proof that covid exists in our country! Only influenza A & B. NIP THIS IN THE BUD BY IGNORING THE NEWS.. STOP the fear mongering! Its killed enough ppl already. If we are as overpopulated as the democrats keep saying they can close our borders and stop killing Americans!!

I had time to think about that graph, and I have to admit that I find some things wrong with the prediction.

- 1) The projections show a greater than 100% reduction in immune performance, eventually. There's nothing left to lose after 100%.
- 2) The projections show an increasing rate of loss in immune performance, right up to 100%. In normal systems one would expect a hyperbolic curve that approaches 100% as its asymptote. If you lose half one week, and half of what's left the next week, then the rate of decrease slows over time.
- 3) All of the age groups are getting closer together over time. This suggests that the final value (asymptote) that all are approaching can be estimated by observing the rate at which they approach each other versus their distance from each other. In other words, they're all headed for the same point, ultimately.

Two questions:

- Can this vaccine acquired aids be treated with existing hiv-medications?
- is there any difference to the outcome if you've only had one dose of the vaccine?

AIDS / HIV doesn't have a reliable test, just like covid doesn't have. The same PCR fraud.

They don't have AIDS, they poisoned to death or close to it.

How long we let the lie carry on? What's the point to make people believe they will die for sure?

It's not true, I wrote it many times but I wrote again. I know at least 4 people who were vaxxed with these poisons, they all got 2, they didn't get 'booster', they are ok now, recovered, 2 out of the 4 had side effects, another 2 living on abroad, didn't have side effects (placebo?) we don't know. But they are ok.

People suffer from acute radiation sickness called covid / aids / soon Marburg. The graphene oxide in the vax is an ionizer, it multiplies the effect of the environmental radiation (cell towers, 5G masts, your wifi, smart stuff, etc) to an ionizing level, you are irradiated from the inside.

But the body disintegrate it with time (3-6 months can be read), hence the push for the boosters. Who survive this 3-6 months without being badly ill already, probably will recover fully if don't go for boosters and stay away from wireless radiation as much as possible.
